Senior C++ / C# engineer. 30 years shipping real-time systems: game engines and tooling, low-level networking, and regulated medical-device software. Authorized to work in Canada, no sponsorship needed. Open to remote, relocation, or contract.

EXPERIENCE

Utherverse	2024-25
Assistant to Director of Development. Live virtual-world platform operations.	
BioWare	2023-24
Shipped the dialogue and narrative system for Dragon Age 4 on Frostbite.	
Activision	2022-23
Call of Duty live-ops. Ported low-level networking and real-time voice chat to Nintendo Switch.	
Sega / Relic	2021-22
Company of Heroes 3. Profiled and optimized a C++ system for a measured 7% performance gain on the shipping title.	
Electronic Arts	2016-21
Five years on Frostbite editor frameworks, cinematics and lighting. Wrote the blueprint / visual-scripting system used across the studio.	
Unity (Finger Food)	2014-16
Development Team Lead across Skylanders, Star Wars BB-8 and Call of Duty. Accelerated Skylanders asset-bundle loading by 200%. Shipped Skylanders Imaginators on iOS and Android.	
Industrial Alliance	2013-14
Architected Unification in .NET. WPF, WCF, MVVM.	
Microsoft Big Park	2012-13
Real-time Lua UI for NFL, ESPN and UFC on Xbox.	
Novadaq	2012-13
Lead architect, SPY ELITE. Regulated surgical fluorescence-imaging medical device.	
FinancialCAD	2010-12
Lead architect, Silverlight / XNA presentation layer.	
Neoteric	2004-10
Win32 / C++ UI libraries. Led a team of four.	
Max Integration	2004
Project lead on Look Out, a Win32 CRM flagship.	
RedHawk Gaming	2001-03
Gaming subsystems and low-level device drivers.	
Infowave	1997-01
QA Lead. Managed a team of five, built automated test suites.	
Electronic Arts	1996-97
QA on NHL 98, Need for Speed, Warcraft II and PGA Tour.	

SKILLS

C++ (11/14/17), C#, Python, Lua, JavaScript, SQL · Frostbite, Unity, Havok, Essence · multithreading, memory management, real-time networking, profiling and optimization · WPF / XAML, Win32, MVVM · engine tooling and editor frameworks

INDEPENDENT RESEARCH

Verification and calibration for AI systems. Built a 66.4M-fact knowledge engine that runs with zero neural weights, reports a measured confidence and abstains rather than guessing. Published the anchor law with its own retraction: earlier figures were withdrawn and re-measured on four orders of magnitude more evidence. Live demo and whitepaper at
