linkedin.com/in/r-j-thompson-9531588 | github.com/rj45Thompson | rj45thompson.github.io/anchor-demo

Senior C++ / C# engineer. 30 years shipping real-time systems: game engines and tooling, low-level networking, and regulated medical-device software. Authorized to work in Canada, no sponsorship needed. Open to remote, relocation, or contract.

CURRENT WORK

Tami - Unity tactics RPG, engine and tooling

2025 - present

A full tactics RPG built solo in Unity, and more tools than game: a terrain and tile editor with one runtime engine behind two front-ends, a type-driven UI catalogue with an HTTP bridge so panels can be inspected and screenshoted headlessly, an authoring tool for ability and item VFX, and a **1,039-test** EditMode suite run against an isolated clone rather than the live editor. Also wrote a Unity Shuriken to Unreal Niagara VFX converter when no off-the-shelf one existed: **65 of 65** emitters port structurally, and the honest finding is that the LOOK does not, because blend mode is a number in the source material rather than anything a shader name reveals.

Verification and calibration for AI systems

2025 - present

A knowledge engine with **no neural weights** over **66.4M facts**, running entirely in the browser: it reports a measured confidence per inference chain and abstains rather than guessing. Published with its own retraction - the headline result was withdrawn when a constant-guess baseline passed the same gate at 88.9%, and the corrected figure was re-measured on four orders of magnitude more evidence. Related public datasets: BossBench and WarShip on Hugging Face.

EXPERIENCE

Utherverse

2024-25

Assistant to the Director of Development. Live virtual-world platform operations.

BioWare

2023-24

Shipped the dialogue and narrative system for **Dragon Age 4** on Frostbite.

Activision

2022-23

Call of Duty live-ops. Ported low-level networking and real-time voice chat to Nintendo Switch.

Sega / Relic

2021-22

Company of Heroes 3. Profiled and optimized a C++ system for a measured **7%** performance gain on the shipping title.

Electronic Arts

2016-21

Five years on Frostbite editor frameworks, cinematics and lighting. Wrote the blueprint / visual-scripting system used across the studio.

Unity (Finger Food)

2014-16

Development Team Lead across **Skylanders**, **Star Wars BB-8** and Call of Duty. Accelerated Skylanders asset-bundle loading by **200%**. Shipped Skylanders Imaginators on iOS and Android.

Industrial Alliance

2013-14

Architected Unification in .NET. WPF, WCF, MVVM.

Microsoft Big Park

2012-13

Real-time Lua UI for NFL, ESPN and UFC on Xbox.

Novadaq

2012-13

Lead architect, **SPY ELITE**. Regulated surgical fluorescence-imaging medical device.

FinancialCAD

2010-12

Lead architect, Silverlight / XNA presentation layer.

Neoteric

2004-10

Win32 / C++ UI libraries. Led a team of four.

Earlier: Max Integration, project lead on a Win32 CRM (2004) · RedHawk Gaming, subsystems and device drivers (2001-03) · Infowave, QA lead of five (1997-01) · Electronic Arts, QA on NHL 98, Need for Speed, Warcraft II (1996-97)

SKILLS

Languages: C++ (11/14/17), C#, Python, Lua, JavaScript, SQL

Engines: Frostbite, Unity, Unreal, Havok, Essence

Systems: multithreading, memory management, real-time networking, profiling and optimization

UI: WPF / XAML, MVVM, Win32, custom editor frameworks
